PROJECTS

Nurse Monitor System - Team Project (April 2021)
https://github.com/Edennyk/comp308-group4

- Designed a web application for nurses to monitor patient condition; used React, Node.js
- Used JWT web tokens to handle user authentication and log-in; all information stored using MongoDB
- Nurse clients can access list of all registered patients, record a patient's status, provide patients with recommendations, and have access to real-time alerts from patients
- Patient users can self-record medical information, access nurses' recommendations, and send emergency alerts to nurses
- The app can predict the onset of hepatitis using patient's medical information passed through Tensorflow.js

ManyJobs API - Pair Programming (December 2020)
https://github.com/Edennyk/ManyJobs

- Designed a RESTful API that connects job seekers and employers using asp.net core and generated through open API on Swagger
- Generated applicant and job pool databases in AWS Relational Database Service and hosted API on AWS Elastic Beanstalk
- Created API proxies on Apigee to secure data

Momentum (August 2020)
https://github.com/Edennyk/momentum

- Designed a web application using JavaScript to display a personal dashboard with the user's name, clock, to-do list, the weather, and a function in which the wallpaper refreshes when the user refreshes the page
- Implemented an open weather map API that reveals current weather based on user location

Travel Agency (July 2020)
https://github.com/Edennyk/travel

- Designed a mock web page for a travel agency using HTML, CSS, and Sass
- Implemented a book counter through JavaScript; added a pulse effect to photos with CSS animations

MyChat (July 2020)
https://github.com/Edennyk/myChat

- Designed online messaging application using HTML and CSS
- Implemented CSS animation effects on user avatars, input text and received texts on the main screen
